

AMENDMENTS TO THE CLAIMS

1. (Currently amended) A method of performing a competition between teams by means of at least two sets of modular units, the method comprising the steps of:

connecting a first set of modular units to a second set of modular units, wherein each set comprises at least one modular unit;

determining which first modular unit in the first set is connected to which second modular unit or units in the first set;

determining which third modular unit in the second set is connected to which fourth modular unit or units in the second set;

determining for a set of information items at least one modular unit, wherein each information item individually relates to a specific modular unit in said sets; and wherein said set of information items represents competition-related information, and wherein said set of information items depends on comprises the way in which said modular units are located relative to one another, ~~and/or a property for each modular unit and/or which first competition is performed;~~

distributing the set of information items to the corresponding modular units; and
presenting said set of information items on the modular units.

2. (Currently Amended) A method as claimed in claim 1, ~~characterized in that the method~~ further comprises the step of further comprising:

receiving a first information item representing a property of a modular unit.

3. (Currently Amended) A method according to claim 1, ~~characterized in that the method~~ further comprises the step of further comprising:

receiving a second information item representing a second competition.

4. (Currently Amended) A method according to claim 1, ~~characterized in that the method further comprises the steps of~~ further comprising:

disconnecting a third set of modular units from the first and second set of modular units, wherein said third set comprises at least one modular unit; or

connecting a fourth set of modular units to said first and second set of modular units, wherein said fourth set comprises at least one modular unit.

5. (Currently amended) A computer system for performing ~~the method according to claim 4~~ a competition between teams by means of at least two sets of modular units, said computer system comprising:

means for connecting a first set of modular units to a second set of modular units, wherein each set comprises at least one modular unit;

means for determining which modular unit is connected to which second modular unit or units in the first and the second set;

means for determining a set of information items, wherein each information item individually relates to a specific modular unit in said sets; and wherein said set of information items represents competition-related information, and wherein said set of information items comprises the way in which said modular units are located relative to one another in said sets;

means for distributing the set of information items to the corresponding modular units in said sets; and

means for presenting one of said information items.

6. (Currently amended) ~~A computer program product comprising program code means stored on a computer-readable medium for performing the method of claim 1 when the computer program is run on a computer.~~ A computer-executable code stored on a computer-readable medium for performing a competition between teams by means of at least two sets of modular units, said code when executed by a computer, executes the steps of:

connecting a first set of modular units to a second set of modular units, wherein each set comprises at least one modular unit;

determining which first modular unit in the first set is connected to which second modular unit or units in the first set;

determining which third modular unit in the second set is connected to which fourth modular unit or units in the second set;

determining for a set of information items at least one modular unit, wherein each information item individually relates to a specific modular unit in said sets; and wherein said set of information items represents competition-related information, and wherein said set of information items comprises the way in which said modular units are located relative to one another in a playfield;

distributing the set of information items to the corresponding modular units; and
presenting said set of information items on the modular units.

7. (Currently amended) A modular unit for performing a competition between teams by means of at least two sets of modular units, said modular unit comprising:

means for connecting a first set of modular units to a second set of modular units, wherein each set comprises at least one modular unit;

means for determining which modular unit is connected to which second modular unit or units in the first and the second set;

means for determining a set of information items, wherein each information item individually relates to a specific modular unit in said sets; and wherein said set of information items represents competition-related information, and wherein said set of information items ~~depends on~~ comprises the way in which said modular units are located relative to one another in said sets, and/or a property for each modular unit and/or which first competition is performed;

means for distributing the set of information items to the corresponding modular units in said sets; and

means for presenting one of said information items.

8. (Currently amended) A modular unit as claimed in claim 7, ~~characterized in that the modular unit further comprises~~ further comprising:

means for receiving a first information item representing a property of a ~~modulator~~ modular unit.

9. (Currently Amended) A modular unit according to claim 7, ~~characterized in that the modular unit further comprises~~ further comprising:

means for receiving a second information item representing a second competition.

10. (New) A method as claimed in claim 1, wherein said set of information items further comprises a property for each modular unit.

11. (New) A method as claimed in claim 1, wherein said set of information items further comprises which first competition is performed.

12. (New) A computer system as claimed in claim 5, wherein said set of information items further comprises a property for each modular unit.

13. (New) A computer system as claimed in claim 5, wherein said set of information items further comprises which first competition is performed.

14. (New) A computer-executable code stored on a computer-readable medium as claimed in claim 6, wherein said set of information items further comprises a property for each modular unit.

15. (New) A computer-executable code stored on a computer-readable medium as claimed in claim 6, wherein said set of information items further comprises which first competition is performed.

16. (New) A modular unit as claimed in claim 7, wherein said set of information items further comprises a property for each modular unit.

17. (New) A modular unit as claimed in claim 7, wherein said set of information items further comprises which first competition is performed.
